**Subject:** RE: PFAS data

Good morning Steve,

Thank you for clarifying your interests in PFAS discharge data. In reviewing the EXCEL file provided in Tom Born's October 1, 2019 memo, I believe you already have access to most of the NPDES PFAS discharge data that I am aware of. This includes direct discharges from the Chemours Washington Works facility and its four associated landfills. I also noted that the Little Hocking, Ohio PWS is monitoring its wastewater discharge for PFOA. Also included on the list are the Naval Air Warfare Center POTW discharge and the nearby CRC Industries discharge in Warminster, PA.

There are a few surface discharges which were missing from the list however. The Horsham, Pennsylvania POTW has some PFAS discharge data. I will contact the township manager and determine if they can share the data with us. In addition, over the last few years the Navy has amassed some surface water monitoring data in the vicinity of the Naval Air Station Joint Reserve Base in Horsham, PA. The elevated PFAS levels appear to be coming from both on-site and off-site sources. Within the next week or so, I will gather this information together and pass it on to you. In the meantime, if you have any questions please let me know. Thanks.

Roger Reinhart

**Subject:** PFAS data

Roger,

It was a pleasure speaking with you last week. I met with Tom Born regarding the PFAS data you have and would request the following:

- There is **no** need to provide groundwater monitoring data
- We would be interested in any surface water discharge data you have, especially for the Chemours Washington Works facility and DoD/POTW sites we discussed
- If you have any ambient water data (surface water) that would be a bonus
- If the discharge data is in ICIS/NPDES, please let me know and we can download it there

Thanks again and please feel free to contact me with any questions!

Steve
